# Recruitment task

Your job is to build a feature called a floating button. The purpose of this feature is to engage users to book a new cleaning.

Designs:
https://www.figma.com/design/FWHKEVVLX2fEzWk4W8Mi2y/Batmaid---Recruitment-task?node-id=0-1&t=fizu8qmHVDmukaWv-1

Rules:
1. Create a new git repository for this project
2. The project's tech stack has to be built on top of React and TypeScript
3. Use provided mocked data
4. Mock a fetch request and use any state management solution to store the data from the response
5. You can transform the data however you like, the goal is to have it in a shape that makes it easy to render it
6. You can style the components anyway you want - pure CSS, a CSS library etc.
7. Pixel-perfect is not a goal but try to be as close as possible to the design
8. Animations for this feature are important because they will enhance the User-Experience. Try to make animations that will feel more natural for users
9. We didn't include any designs for the mobile view on purpose, try to propose some solution.
10. (Nice to have) Please include a fallback state for the empty response
11. (Nice to have) Please create a loading state
12. (Nice to have) Please lazy load the floating button when requirements are meet
13. If you have any question feel free to contact us
14. Good luck!
